

## LIGHT HOUSE

Prashanth Shet

A lighthouse is a tower, building, or other type of structure designed to emit light from a system of lamps and lenses and to serve as a beacon for navigational aid, for maritime pilots at sea or on inland waterways. Lighthouses mark dangerous coastlines, hazardous shoals, reefs, rocks, and safe entries to harbors; they also assist in aerial navigation. Once widely used, the number of operational lighthouses has declined due to the expense of maintenance and has become uneconomical since the advent of much cheaper, more sophisticated and effective electronic navigational systems. Lighthouses vary in structure, shape etc. There are day and night lighthouses so also the energy used to generate the light rays varies. This exhibit shows some cancellation of light house and a light house post card with cache cancellation of lighthouse.

हजिरा दीप स्तंभ, सुरत  
HA-JIRA LIGHTHOUSE, SURAT

Hajira light house Surat(Gujarat) was first set up in 1836 and the and the 82ft white stone masonry was built in 1966. It is one of the first British light stations which is developing into a major port facility. Released on 21.09.2021.
