

Friends let's explore the **Australian Garden**. Here you can see how they have harnessed the **Rain Water system** for watering their **Veggie Garden** which is built on raised patch of earth to avoid digging. Below you see a **Worm Farm** that makes nutritious fertiliser for the garden, also you see **Pollinators** that help in the growth and reproduction of the variety of native plants. In the corner, near the pond there is a **Nest Box**, which attracts small birds for nesting. A wonderful way of creating a environment friendly garden.
