## BORN OUT OF LOVE

New human life is created when the female egg and the male sperm cell fuse during the act of love.

After  $\pm$  1 week, a fertilized egg implants in the uterine wall and grows into an embryo and then gradually into a baby in the mother's womb.

The duration of the pregnancy is  $\pm$  40 weeks.

des sages-femmes  
Lausanne  
21-27 VI 1975

The first important choice after birth: Breast or bottle feeding?

As the infant grows, the porridge is thickened to facilitate the transition to solid food. And the baby grows steadily.
